

Starting at \$2,500

Panel Replacement

Replacing an outdated panel is a critical upgrade that improves the safety, reliability, and performance of your home's electrical system. Outdated or Overloaded panels struggle to handle today's power demands, leading to frequent breaker trips, flickering lights, and even fire hazards.

Replacing an old panel ensures your system can safely distribute electricity throughout your home. It also allows for additional capacity to support modern needs like EV chargers, hot tubs, HVAC systems, and new appliances.

SAFE & RELIABLE ELECTRICAL UPGRADES!
